

INTRODUCING THE **ALLPOLY FEEDER** FROM GOUGH PLASTICS

THE ALLPOLY FEEDER
IS OUR REVOLUTIONARY,
NEW CATTLE FEED SHELTER
DESIGNED TO PROTECT LICK
SUPPLEMENT FROM WET WEATHER
CONDITIONS AND **NO RUST!**

Easy to assemble with two complete poly parts,
roof and base, that cleverly fit together
with four poly pins, there's no need for bolts.

Just pop the pins in and twist to lock.

No stress, no sweat, and no rust!

Rainwater from the roof flows down
the hollow legs of the feeder to the feet
and is dispersed away from the unit.

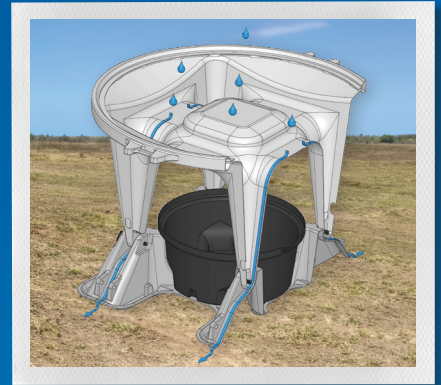

**EASY TO
ASSEMBLE**

GOUGH PLASTICS ALLPOLY FEEDER FEATURES AND BENEFITS

The AllPoly Feeder easily allows several large cattle to fit under the roof and feed from the unit.

Accommodating a 330L, 450L or a 550L trough which 'locks' into place within the unit, the feeder keeps the trough and feed secure from bullying livestock.

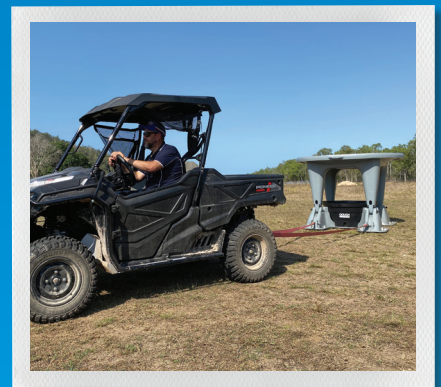

The AllPoly Feeder is easy to fill. Just release two

pins and use the built-in handle to tilt the roof to fill with a bag lifter, hopper or manually from a ute.

The AllPoly Feeder has a flat roof for stacking of up to twenty units for easy transport. Once at the station, it can be easily positioned with a ute or a forklift. It is strong and durable, but light to lift and move effortlessly by one person.

Cleaning the trough is simple. Just tilt and roll out, clean and roll back under into the holding cavity.

The AllPoly Feeder may be placed on any ground. If required, the feeder can be tied to a ute or buggy and easily pulled along to more stable ground. We can also supply Geohex to prevent cattle digging and undermining the unit.
